Set Pressure and Resealing Pressure

- Set pressure is the upstream pressure at which the first indication of flow occurs
- Set pressure of each valve after initial relief is repeatable within 5% at room temperature
- Resealing pressure is the upstream pressure at which there is no indication of flow
- Resealing pressure is always lower than set pressure.

Testing • Each valve is factory tested for set and reseal performance.

Cleaning and Packaging

- Each valve is cleaned and packaged in accordance with the standard specification of cleaning and packaging.
